

MCG WEBSITE PRODUCT BACKLOG

(Professional Scrum Format)

Product Vision

Build a premium boutique consulting website that:

- positions MCG as a global advisory platform
- creates trust within 10 seconds
- explains services clearly
- generates consulting leads
- supports partnerships
- scales with future CRM integrations

Product Strategy Themes (Inspired by reviewed firms)

Theme 1 — Clarity first (Simon-Kucher style)

Simple messaging hierarchy.

Theme 2 — Credibility design (Alvarez & Marsal style)

Professional institutional feel.

Theme 3 — User-journey design (Propeller style)

Navigation driven by visitor needs.

Core Design Principles

MCG site must be:

- Simple
- Fast
- Structured
- Premium
- Clear
- Conversion focused

Avoid:

- Startup looking design
- Over animations
- Marketing fluff
- Plugin dependency

PRODUCT EPICS

EPIC LIST:

EPIC 1 Homepage Experience EPIC 2 Services Architecture EPIC 3 Industries Structure EPIC 4 Insights Platform EPIC 5 Case Studies EPIC 6 Partnership Platform EPIC 7 Leadership & Advisors EPIC 8 Contact Funnel EPIC 9 SEO Structure EPIC 10 Design System

Yes — removing **Priority** and **Story Points** actually makes this much better for a developer handoff because it becomes a clean **functional requirements backlog** instead of an internal Scrum estimation document.

Below is your **clean MCG WEBSITE PRODUCT BACKLOG (Developer-ready version)**.

MCG WEBSITE PRODUCT BACKLOG

Multiverse Consulting Group — Website Functional Requirements

PRODUCT VISION

Build a premium boutique consulting website that:

- positions MCG as a global advisory platform
- creates trust within 10 seconds
- explains services clearly
- generates consulting leads
- supports partnerships
- scales with future CRM integrations

CORE DESIGN PRINCIPLES

Website must be:

• Simple • Fast • Structured • Premium • Clear • Conversion-focused

Avoid:

• Startup looking design • Over animations • Marketing fluff • Plugin dependency • Paid integrations

PRODUCT EPICS

EPIC 1 Homepage Experience EPIC 2 Services Architecture EPIC 3 Industries Structure EPIC 4 Insights Platform EPIC 5 Case Studies EPIC 6 Partnership Platform EPIC 7 Leadership & Advisors EPIC 8 Contact Funnel EPIC 9 SEO Structure EPIC 10 Design System

EPIC 1 — HOMEPAGE EXPERIENCE

STORY 1.1 Hero Positioning

User Story:

As a corporate visitor I want to immediately understand what MCG does So I know if I should continue.

Developer Requirements:

Build hero section containing:

Headline Subheadline 3 capability pillars CTA buttons

Structure example:

Headline:

Global Advisory Platform for Strategy, Talent and Investment

Subheadline:

Helping organizations expand, transform and execute.

Capability pillars:

StrategyTalentExpansion

CTA buttons:

ContactServices

Acceptance Criteria:

Hero visible above foldMobile responsiveCTA clickableClean typography hierarchy

STORY 1.2 Capability Highlights

User Story:

As a visitorI want to see key capabilitiesSo I trust expertise.

Developer Requirements:

Add capability cards section:

Cards:

Strategy AdvisoryAI TransformationTalent & Executive SearchGlobal ExpansionInvestment Advisory

Acceptance Criteria:

5 capability cardsHover interactionClickable navigationResponsive grid layout

STORY 1.3 Trust Signals Section

User Story:

As a clientI want credibility signalsSo I trust MCG.

Developer Requirements:

Build:

Why MCG section

Include:

Senior advisory model Global network Execution focus Boutique flexibility

Acceptance Criteria:

4 credibility blocks Icons or visual elements Clean layout Professional tone

EPIC 2 — SERVICES ARCHITECTURE

STORY 2.1 Services Landing Page

User Story:

As a visitor I want to browse services So I understand offerings.

Developer Requirements:

Create services overview page.

Structure:

Service category grid.

Categories:

Strategy & Growth Advisory AI & Digital Transformation Talent & Executive Search Global
Market Expansion Investment & Business Advisory

Acceptance Criteria:

Grid layout Cards clickable Mobile responsive Consistent design

STORY 2.2 Individual Service Pages

User Story:

As a client I want detailed service explanation So I understand value.

Developer Requirements:

Each service page must include:

Service overview Problem definition MCG approach Value delivered Example outcomes CTA section

Page structure:

Hero title Overview section Challenges section Solutions section Outcomes section Contact CTA

Acceptance Criteria:

Consistent structure across services Readable layout CTA present Mobile responsive

EPIC 3 — INDUSTRIES STRUCTURE

STORY 3.1 Industry Landing Page

User Story:

As a visitor I want to see industry expertise So I trust specialization.

Developer Requirements:

Build industries overview page.

Industries:

Healthcare Technology Financial Services Education Real Estate International Trade

Acceptance Criteria:

Industry cards Icons Short descriptions Clickable navigation

STORY 3.2 Industry Detail Pages

User Story:

As a visitor I want to understand industry expertise So I trust MCG experience.

Developer Requirements:

Each industry page must include:

Industry challenges MCG advisory approach Solutions Related services Related insights

Acceptance Criteria:

Reusable template Consistent formatting Clear content hierarchy

EPIC 4 — INSIGHTS PLATFORM

STORY 4.1 Insights Landing Page

User Story:

As a visitor I want to read insights So I trust expertise.

Developer Requirements:

Build insights page.

Structure:

Article cards layout.

Each card must include:

Title Category Date Short summary Read link

Acceptance Criteria:

Grid layout Preview text visible Mobile responsive Clean typography

STORY 4.2 Article Page Template

User Story:

As a visitor I want to read an article So I can learn from MCG insights.

Developer Requirements:

Article page must include:

Title Hero visual area Article content Related insights section

Acceptance Criteria:

Readable typography Proper spacing Clear structure

EPIC 5 — CASE STUDIES

STORY 5.1 Case Studies Landing Page

User Story:

As a potential client I want to see examples So I understand results.

Developer Requirements:

Build case studies overview page.

Cards must include:

Challenge Solution Outcome

Acceptance Criteria:

Card layout Simple descriptions Clickable pages

STORY 5.2 Case Study Detail Page

User Story:

As a visitor I want detailed examples So I understand MCG impact.

Developer Requirements:

Structure:

Challenge Approach Result Impact

Acceptance Criteria:

Consistent format Clear story structure Readable layout

EPIC 6 — PARTNERSHIP PLATFORM

STORY 6.1 Partnership Page

User Story:

As a potential partner I want to see collaboration opportunities So I can engage.

Developer Requirements:

Partnership page must include:

Partner categories:

Consulting firms Technology providers Regional advisors Investors

Include:

Benefits section Engagement model Partner CTA

Acceptance Criteria:

Clear partner types Benefits explanation Contact CTA

EPIC 7 — LEADERSHIP & ADVISORS

STORY 7.1 Leadership Page

User Story:

As a visitor I want to see leadership So I trust the firm.

Developer Requirements:

Build leadership grid.

Each card:

Photo placeholder Name Title Expertise summary

Acceptance Criteria:

Grid layout Clean typography Expandable future capability

EPIC 8 — CONTACT FUNNEL

STORY 8.1 Contact Page

User Story:

As a visitor I want easy contact So I can reach MCG.

Developer Requirements:

Build contact form.

Fields:

Name Email Company Country Interest dropdown:

Strategy Expansion Talent AI Partnership

Message field

Acceptance Criteria:

Email validation Success message No paid integrations Clean UX

STORY 8.2 CTA System

User Story:

As a visitor I want clear actions So I know next steps.

Developer Requirements:

Standardize CTAs:

Contact MCG Discuss Engagement Partner With Us Explore Services

Acceptance Criteria:

Consistent CTA style Visible placement Reusable component

EPIC 9 — SEO STRUCTURE

STORY 9.1 SEO Basics Implementation

User Story:

As a search engine I want structured content So site ranks properly.

Developer Requirements:

Add:

Meta titles Meta descriptions Alt tags H1 hierarchy

Acceptance Criteria:

Every page contains:

H1Meta titleMeta descriptionAlt text

Clean URLs:

/services/industries/insights/about/contact

EPIC 10 — DESIGN SYSTEM

STORY 10.1 UI Component System

User Story:

As a developerI want reusable componentsSo the site stays consistent.

Developer Requirements:

Create reusable components:

CardsButtonsContainersNavigationSectionsForms

Acceptance Criteria:

Consistent spacingReusable stylesClean structureMobile responsive

FINAL DEVELOPER IMPLEMENTATION CHECKLIST

Must implement:

✓ Clear hero messaging✓ Structured services✓ Industry pages✓ Insights layout✓ Case study format✓ Partnership section✓ Leadership page✓ Contact funnel✓ SEO basics✓ Design system

Must avoid:

✗ Paid integrations✗ Complex animations✗ Overdesign✗ Plugin dependence✗ External heavy libraries

If you want, next I can also build the **final missing piece most developers need**:

MCG Developer Technical Architecture Blueprint

This would include:

- Exact folder structure
- Component structure
- Page structure
- Naming conventions
- Routing architecture
- CMS-ready structure
- Scalability preparation

(This is usually what prevents 80% of rebuilds later.)

Absolutely — here is the **MCG Developer Technical Architecture Blueprint** in a clean handoff format.

MCG DEVELOPER TECHNICAL ARCHITECTURE BLUEPRINT

Multiverse Consulting Group — Frontend / Site Build Structure

1. BUILD OBJECTIVE

Build a clean, scalable, premium consulting website for **Multiverse Consulting Group** that is:

easy to maintain

easy to expand

component-based

mobile responsive

SEO-ready

compliance-conscious

not dependent on paid tools for core functionality

2. RECOMMENDED FRONTEND APPROACH

Preferred stack:

React

Next.js preferred for production

Tailwind CSS

Static/content-driven architecture first

Form handling via simple backend endpoint or serverless function later

If staying lightweight for MVP:

React + Vite

Tailwind CSS

simple route-based pages

3. PROJECT STRUCTURE

Recommended folder structure

/src

 /components

 /layout

 Header.tsx

- Footer.tsx
- Navigation.tsx
- MobileMenu.tsx
- PageHero.tsx
- SectionWrapper.tsx

/ui

- Button.tsx
- Card.tsx
- SectionLabel.tsx
- Input.tsx
- Textarea.tsx
- Select.tsx
- Badge.tsx
- CTAGroup.tsx

/home

- HeroSlider.tsx
- CapabilityGrid.tsx
- TrustSignals.tsx
- MarketsSection.tsx
- InsightsPreview.tsx
- CaseStudiesPreview.tsx

/services

- ServiceCard.tsx
- ServiceHero.tsx
- ServiceOverview.tsx
- ServiceChallenges.tsx
- ServiceOutcomes.tsx

/industries

- IndustryCard.tsx
- IndustryOverview.tsx

/insights

- InsightCard.tsx

RelatedInsights.tsx

4. PAGE ARCHITECTURE

Core pages required

Home

About

Value Delivery System

Services

Service detail pages

Industries

Industry detail pages

Insights

Article detail page

Case Studies

Case Study detail page

Partnerships

Leadership

Contact

5. LAYOUT ARCHITECTURE

Every page should follow one shared layout pattern:

Header

Main hero / page intro

Main content sections

CTA block

Footer

Shared layout rules

sticky header

consistent section spacing

single content width system

reusable CTA sections

reusable page hero system

reusable footer

6. COMPONENT ARCHITECTURE

Layout components

Use shared components for:

Header

Footer

SectionWrapper

Navigation

Mobile menu

Page hero

CTA strip

UI components

Use reusable UI primitives for:

Button

Card

Inputs

Select dropdown

Textarea

Labels

Tag/badge

Icon wrapper

Content modules

Reusable blocks should support:

2-column image/text layout

3-card grid

article preview grid

case study cards

market tiles

leadership cards

industry cards

7. DATA ARCHITECTURE

Keep content separate from components.

Example content-driven approach

Store content in `/data` files:

`services.ts`

`industries.ts`

`insights.ts`

`caseStudies.ts`

This allows:

easier editing

future CMS migration

cleaner code

less duplication

Example service object

```
{
  slug: "strategy-growth-advisory",
  title: "Strategy & Growth Advisory",
  shortDescription: "...",
  heroTitle: "...",
  overview: "...",
  challenges: [...],
  solutions: [...],
  outcomes: [...],
  ctaText: "Contact MCG"
}
```

8. ROUTING ARCHITECTURE

Use simple SEO-friendly routes.

Required routes

/

- /about
- /value-delivery-system
- /services
 - /services/strategy-growth-advisory
 - /services/global-expansion-advisory
 - /services/talent-executive-search
 - /services/ai-transformation-advisory
 - /services/strategic-advisory-partnerships
- /industries
 - /industries/technology
 - /industries/real-estate
 - /industries/education
 - /industries/professional-services
- /insights
 - /insights/[slug]
- /case-studies
 - /case-studies/[slug]
- /partnerships
- /leadership
- /contact

9. STYLING ARCHITECTURE

Design tokens should be centralized

Define brand tokens once.

Example tokens

indigo

gold

ink

mist

line

text

textSoft

textMuted

Typography rules

Use global typography scale:

Hero H1

Page H1

Section H2

Card H3

Body text

Small metadata text

Spacing rules

Use consistent spacing system:

section vertical spacing

card padding

gap spacing

button sizes

10. RESPONSIVE ARCHITECTURE

Breakpoints

Support at minimum:

mobile

tablet

desktop

large desktop

Mobile requirements

mobile nav menu

stacked sections

readable text hierarchy

reduced visual density

touch-friendly buttons

slider should remain usable on mobile

11. FORM ARCHITECTURE

Contact form fields

first name

last name

company

email

industry

message

Form requirements

front-end validation

success message

error message

accessible labels

no paid integrations required in MVP

Suggested implementation

Use:

controlled form state

simple POST endpoint later

placeholder handler for MVP

12. SEO ARCHITECTURE

Every page should support:

title tag

meta description

H1

alt text

canonical path

Open Graph image later

Suggested utility

Create reusable SEO helper:

```
setPageSEO({  
  title,  
  description,  
  path  
})
```

13. ACCESSIBILITY REQUIREMENTS

Must include:

- semantic headings
- button labels
- form labels
- aria-label on slider controls
- keyboard accessible nav
- sufficient color contrast
- visible focus states

14. PERFORMANCE REQUIREMENTS

Developer should prioritize:

- lightweight components
- minimal JS overhead
- optimized images if used later
- no unnecessary animation libraries

no heavy third-party embeds for MVP

Avoid:

video backgrounds

large uncompressed assets

unnecessary carousels outside homepage

15. VISUAL SYSTEM RULES

Homepage slider

Only one main slider on homepage.

Rules:

5 slides max

subtle transitions

thumbnail navigation

arrows

no autoplay dependency on external libraries if avoidable

Section visuals

Use:

abstract visuals

controlled brand graphics

simple premium visual language

Avoid:

random stock photos

overly busy imagery

inconsistent icon styles

16. CONTENT MANAGEMENT STRATEGY

For MVP:

local structured data files

Later:

migrate to CMS if needed

Best future-ready options:

Sanity

Contentful

Strapi

simple markdown-based content

But not required now.

17. FUTURE INTEGRATION READINESS

The codebase should be prepared for future:

CRM integration

Stripe integration

Calendly integration

CMS migration

article publishing workflow

But do not hardwire these in MVP.

18. TESTING REQUIREMENTS

Minimum testing expectations

Developer should verify:

all routes work

nav links work

hero slider works

forms validate

mobile layout works

no broken content blocks

page hierarchy is consistent

Suggested test coverage

render homepage

render service pages

verify slider navigation

verify CTA visibility

verify form fields appear

verify footer links render

19. NAMING CONVENTIONS

Use clear naming:

Good:

HeroSlider

ServiceCard

IndustryOverview

ContactForm

Avoid:

Component1

SectionX

TempCard

Routes and slugs should be lowercase and hyphenated.

20. BUILD PHASES

Phase 1 — Core build

Layout

Homepage

About

Services

Contact

Value Delivery System

Phase 2 — Authority pages

Industries

Insights

Case Studies

Partnerships

Leadership

Phase 3 — Enhancements

SEO refinement

form backend

CMS prep

future integration prep

21. DEVELOPER CHECKLIST

Must build now

shared layout

responsive navigation

homepage

services pages

contact form

insights listing

case study listing

leadership page

partnerships page

footer

reusable design system

Must not build now

portal

dashboard

AI chatbot

paid integrations

external CRM dependency

subscription/paywall logic

22. FINAL IMPLEMENTATION RULE

The codebase should be built so that:

content can be edited easily

pages can be added without redesigning architecture

styling remains consistent

future integrations do not require rebuild

23. RECOMMENDED HANDOFF TO DEVELOPER

Tell your developer:

Build the site as a modular, reusable, content-driven React website with premium consulting-firm styling, no paid service dependency, and future-ready architecture.
